## Heyco Metals Launches New Website

READING, PA – Heyco Metals, a leading manufacturer of light and medium-gauge copper, copper alloys and stainless steel coil & strip, has launched a new website. The site features a contemporary design and new user-friendly features to enhance the online experience for Heyco’s customers, suppliers and partners.

The new website, at [www.heycometals.com](http://www.heycometals.com), presents a comprehensive picture of Heyco’s capabilities, including its proven expertise at partnering with engineers early in the manufacturing process. The site features a series of easily accessible and downloadable specification tables for the company’s extensive line of available alloys, in a range of thicknesses down to .0012”.

With PPAP capabilities, Heyco Metals routinely follows and documents strict protocols to fit seamlessly into the production chain for leading manufacturers in medical, automotive, aerospace and other industries. The new website enables users to initiate a PPAP trial order discussion right from the site.

Heyco specializes in quick turnarounds and small, custom orders, serving the entire U.S. as well as international customers from its rolling mill in southeastern Pennsylvania. When brought into the process early, Heyco’s experienced team partners with customer engineering groups to conceive optimum solutions and provide much more than just its high-quality metal.

“We’re excited about the new-look website, as we think it more accurately presents our capabilities as a leading metal supplier and engineering partner for the manufacturing industry,” said Heyco President Michael P. Jemison. “Heyco Metals is dedicated to delivering effective metal solutions for our customers across the spectrum of medical, automotive and many other sectors.”

Heyco Metals, founded in 1969, is an operating subsidiary of Hummock Industries, a holding company focused on North American manufacturing.
