

The newsletter of HEYCO Metals

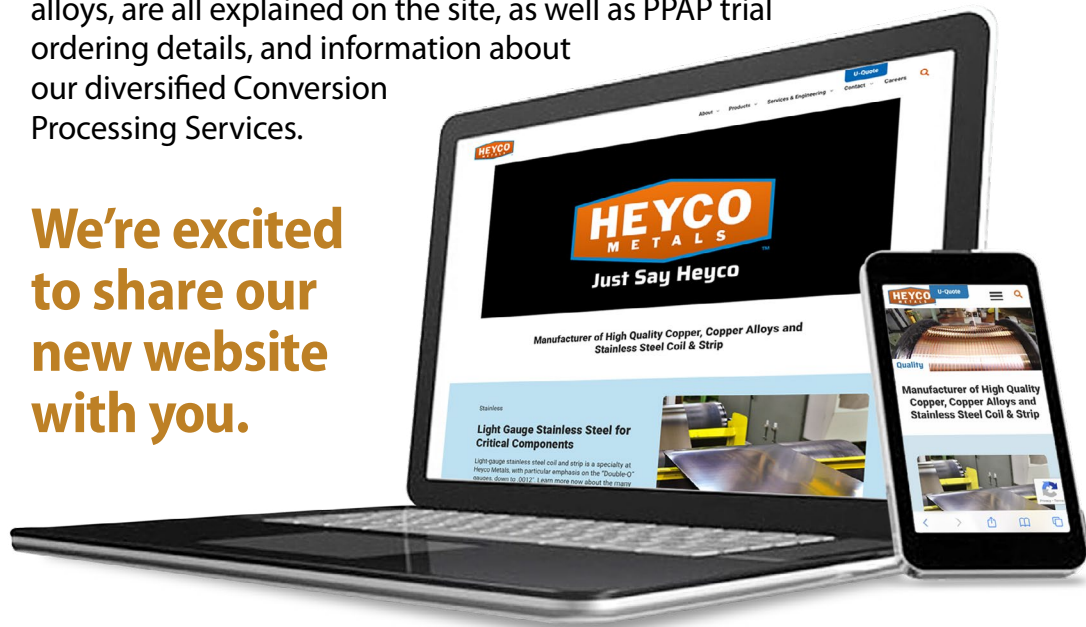

METALNews

New website features engineering insight and manufacturing partnerships.

Enhanced online experience for current and prospective customers.

Visitors to www.heycometals.com will notice something new – the site has been completely revamped, not just with a new look, but with a new engineering focus. The new site is easier than ever to navigate, and it features a series of easily accessible and downloadable specification tables for our extensive line of available alloys. Heyco Metals' capabilities, with light and medium-gauge stainless steel, along with copper and copper alloys, are all explained on the site, as well as PPAP trial ordering details, and information about our diversified Conversion Processing Services.

We're excited to share our new website with you.

Heyco Metals is a full-service copper and stainless steel coil and strip re-rolling mill, located in Eastern Pennsylvania and serving manufacturing and engineering customers worldwide. Brought into the process early on, Heyco's experienced team works effectively with manufacturers to help solve engineering challenges. This revamped website is designed to facilitate that process.
